

# Duplicate Post

<https://wpdemo.net/demos/plugins/copy-delete-posts>

Copy Page plugin by Copy Delete Posts makes it super-easy to duplicate pages or copy posts – and delete them again!

And why is it handy to duplicate pages? Here are just some of the use cases:

Duplicate pages to make short work of using again the same elements you repeatedly use (e.g. text paragraphs, images, video, featured image, etc.)

Create a variation of a page or post fast to modify it and compare side by side (for yourself, your client or company)

Create one perfect set of page templates and then re-use them for different projects, clients or products

Apply a facelift to a specific page but keep the older version in case you want to switch back to it anytime

Make a “holiday special” page template and use it for different holidays with respective adjustments

Create duplicates for pages used in page builders with their custom settings
