

Cyr-To-Lat

<https://wpdemo.net/demos/plugins/cyr2lat>

Convert Non-Latin characters in post, page and term slugs to Latin characters.

Description

Converts Cyrillic characters in post, page and term slugs to Latin characters. Useful for creating human-readable URLs.

Features

The only plugin with fully editable transliteration table. Allows add/remove and edit pairs like 'Я' => 'Ya', or even 'Пиво' => 'Beer'

Converts any number of existing post, page and term slugs in background processes

Saves existing post and page permalinks integrity

Performs transliteration of attachment file names

Includes Russian, Belorussian, Ukrainian, Bulgarian, Macedonian, Serbian, Greek, Armenian, Georgian, Kazakh, Hebrew, and Chinese characters

Has many advantages over similar plugins

* Officially compatible with WPML

Based on the original Rus-To-Lat plugin by Anton Skorobogatov.

The development of this plugin was sponsored by Blackfire.
