

Disable Comments

<https://wpdemo.net/demos/plugins/disable-comments>

This plugin allows administrators to globally disable comments on any post type (posts, pages, attachments, etc.) so that these settings cannot be overridden for individual posts. It also removes all comment-related fields from edit and quick-edit screens. On multisite installations, it can be used to disable comments on the entire network.

Additionally, comment-related items can be removed from the Dashboard, Widgets, the Admin Menu and the Admin Bar.
