

Download After Email - Subscribe & Download Form Plugin

<https://wpdemo.net/demos/plugins/download-after-email>

Download After Email is a free Subscribe & Download plugin that allows you to gain subscribers by offering free downloads.

This is a great way to filter out the serious leads from those that just kick the tires.

Subscribe & Download Form

Creating a new subscribe & download form is pretty much the same as creating a new post or page, only with some extra options. If you are satisfied with the preview you can save the form and place the generated shortcode on a page, post or widget. It is possible to create multiple subscribe & download forms.

Enter Email Before Download

A visitor must enter his email address before the download link will be sent via email. For the secured download links, a limit type can be set such as one-time, unlimited or time-based and the download process is protected against unauthorized use. You can choose whether to send an email notification and to which email address it should be sent.

Responsive & Highly Customizable

The Ajax-based opt-in form is fully responsive and adapts to the space around the form and to the screen. There are many options available to customize the layout of the subscribe & download form and to adjust the text for all notifications including the email that is sent with the download link. It is possible to use HTML and images for the email content. "From Email" and "From Name" can be set.

GDPR Ready

Download After Email offers all necessary tools to let you comply with the GDPR. You can enable a required checkbox and a optional checkbox. The text of the checkboxes

can be adjusted. In the background, data is stored such as IP address, form content, time etc. The use of the download link functions as double opt-in.

Hooks & Filters

Hooks and filters are available for developers to make adjustments or implement extensions. For example, you can write your own HTML code for the subscribe & download form field(s) or for the email that is sent to the subscriber. Or you could add new actions after a download link has been sent and after a download link has been used.

Add Premium Features

[Download After Email Plus](#) is an extension/add-on that adds the following premium features:

- Create and manage your own form fields with the Drag & Drop Form Builder.
- Export subscriber data to a CSV-file and use it for email marketing, newsletters etc.
- Integration with Mailchimp. Automatically add new subscribers to your Mailchimp audience.
