- Premium Support

[Learn more](#) About the PRO version.

## Filters everything in WordPress & WooCommerce

That is any Post types including WooCommerce Products and custom Post types. For example Products, Posts, Pages, Recipes, Real estate objects, Cars — **everything**.

### Filters by any Criteria

They are Categories, Tags, custom Taxonomies, WooCommerce attributes, Custom Fields including created with ACF, Authors etc.

No need to list all possible filters you can create — they can be any, but most popular are:

- [Price](#), [Sale price](#)
- [Brand](#)
- [Product Category](#), Tag
- [Custom Taxonomy](#)
- [Custom Fields](#) including created with ACF plugin
- [Size](#), [Color](#) - any WooCommerce attributes
- [Width](#), [Height](#), [Length](#), [Weight](#)
- [On sale](#) status
- [In Stock](#) status
- [Downloadable](#), [Backordered](#), [Featured](#) product statuses
- [Product type](#)
- [Shipping Class](#)
- [Product Visibility](#)
- [Featured image](#) exists/not exists
- [Views count](#)
- [Post or Product date](#)
- Cooking time

- Calories
- [Author](#)
- ... **any**

## Widgets and shortcodes

[Filters](#), [Sorting field](#) and [Chips](#) (selected filters) can be inserted on a page as widgets or [shortcodes](#)

This allows you easily to integrate filters on your site independently from a theme or page builder you use.

## Page builders

The plugin is compatible with almost all page builders. It was tested with Elementor, Divi, Themify, WPBakery Composer, Oxygen, Beaver builder, Bricks Builder, Breakdance etc.

As the Free version of the plugin supports filtering of the native WordPress loops (Main WP\_Query) only, the full support of the page builders is provided in the PRO version.

## Fine-tuning filter options

Including URL variable names, views, filtering logic, term sorting, collapsing/expanding, hierarchy, more/less, tooltip, search field, related filters, and more...

## Search by keyword field

Allows you to [search among filtered results](#) and vice versa - to filter results received from search.

## Sorting field

Allows you to create a list of own sorting parameters and to place [Sorting field](#) anywhere on your site.

## Supports Color swatches and Brand logos

Allows you to make [filter terms more visible](#)

## «Auto-submission» and «Apply button» modes

“Auto-submission” – filter updates results every time, when you choose option.

“[Apply button](#)” – allows you to select desired criteria and updates results after click on the Submit button only.

## **Step-by-Step filtering**

Allows you to display only particular Filter terms in dependency from selection of another Filter.

## **Vertical and horizontal layouts, columns**

You can display Filters widget in sidebar or [above the filtered posts](#)

## **Compatibility with translation plugins**

Allows you to translate filters with [WPML](#), Polylang and use them in other languages

## **Supports AJAX**

Thus your visitors can [faster to filter](#) without reloading of the whole page.

## **Compatible with popular Themes and Plugins**

Compatible with WPML, ACF, Polylang and others popular. Supports color schemes to allow you easily integrate with your design

## **Filtering values in any languages**

Among them [Chinese, Arabic, Hebrew, Hindi](#) etc

## **Made for developers**

Supports [hooks](#), useful [functions](#) and [templates overriding](#) to allow developers to customize as they like
