PERFORMANCE UPDATES FOR GOOGLE'S CORE WEB VITALS

A faster gallery now means a more favorable ranking in Google!
FooGallery has been specifically optimized to score better for Google's Core Web Vitals update in 2021.
We have focused on the speed of our JavaScript code, and also improved the visual stability of all gallery layouts.
This has led to dramatically better scores for the 3 key lighthouse factors including:

- Largest Contentful Paint – galleries load and appear quicker for your visitors
- First Input Delay – you can interact with the gallery sooner
- Cumulative Layout Shift – gallery images shift around a lot less than before!
