

Freesoul Deactivate Plugins: Plugin Manager

<https://wpdemo.net/demos/plugins/freesoul-deactivate-plugins>

Freesoul Deactivate Plugins allows you to deactivate plugins on specific pages for speed optimization, debugging and problem-solving.

It works for every page, blog posts, custom posts that are publicly queryable, archives and backend pages.

It disables the entire plugins. Your pages will not only send fewer HTTP requests, but you will save also many database queries.
