Hide AI

This plugin is for WordPress users who want a clutter-free interface, without AI buttons and options taking up space.

The point is not to discourage the use of AI in general. In fact, AI was used in research and development, and creation of assets for this plugin. However, theme and plugin developers are injecting buttons and links into core interfaces of the WordPress admin area, as well as in the Gutenburg editor, and it is these areas that this plugin is meant to clean up.

Details

The areas in which AI buttons and links are hidden are limited to core interfaces such as the Media Gallery, Gutenburg, Posts, Pages, and other settings or configuration pages. The intent is not to alter interfaces specific to plugins that offer these AI options, but there is no guarantee as, for example, the elements on those pages may make use of the same CSS classes.

How to use

Simply install and activate the plugin. That's it! There are no settings or options. The plugin takes action only in the admin area, and will automatically hide content from known sources.

Plugins and Themes

The plugin hides AI options generated by the following:

- Elementor
- PostX
- Rank Math SEO

If you use a plugin or theme that is adding AI buttons to the interface, please submit an issue on GitHub to have it included in a later version:
