

Import and export users and customers

<https://wpdemo.net/demos/plugins/import-users-from-csv-with-meta>

Clean and easy-to-use import and export users and customer plugin, for WordPress and WooCommerce. It includes custom user meta to be included automatically from a CSV file and delimitation auto-detector. It also is able to send a mail to each user imported and all the meta data imported is ready to edit into user profile.

- Import CSV file with users directly to your WordPress or customers into WooCommerce
- Import thousands of users or customers in only some seconds
- Export users or customers to a CSV file, filtering by role or registered date
- You can also import meta-data like data from WooCommerce customers
- You can assign roles while importing. To create new user roles or manage existing ones we recommend you using [Profile Builder – Roles Editor](#)
- Send a mail to every new user, this mails can be saved as templates and are fully customizable, before sending you can test it
- Use your own
- You can also update users if the user is already in your WordPress
- Create a cron task to import users periodically
- Edit the metadata (you will be able to edit the metadata imported using metakeys directly in the profile of each user)
- Extend the plugin using the hooks we provide
- Compatible with WPML read the documentation to see how you can translate the front-end import and export users page and send translated email notifications to users

Moreover this plugin is compatible with many other plugins to be able to import and include them data, subscriptions, memberships, etc. Take a look:

- WooCommerce: to import the customer data
- WooCommerce Memberships: to import memberships
- WooCommerce Subscriptions: to create subscriptions associated with users while they are being imported
- BuddyPress: to import custom BuddyPress avatars, fields, groups and roles

- Advanced Custom Fields: to import data to the fields you define there
- Paid Membership Pro: to import memberships, included compatibility with PMPro version 3
- Indeed Ultimate Membership Pro: to import memberships
- Paid Member Subscriptions: to import memberships
- Allow Multiple Accounts: plugin will allow the same rules importing than this plugin
- Groups: to assign users to groups while importing
- New User Approve: you can import users and approve/wait for approve them
- Users Group: to assign users to groups while importing
- WP LMS Course: to enroll users in the courses while importing
- WP Members: to import memberships
- WP Users Group: to assign users to groups while importing
- WooCommerce Membership by RightPress: to create memberships while users are being imported
- WP Private Content Plus: To import and export the groups to which users are assigned

If you have some problem or doubt:

- Read our documentation
- Ask anything in support forum, we try to give the best support

In Codexion we have more plugins, please take a look to them.

- [First payment date for WooCommerce Subscriptions a plugin to set a first payment date in membership sites with WooCommerce Subscriptions](#) (free)
- [Payment Schedule for WooCommerce Subscriptions](#) (premium)

Basics

- Import users and customers from a CSV easily
- And also extra profile information with the user meta data (included in the CSV with your custom fields)
- Just upload the CSV file (one included as example)
- All your users will be created/updated with the updated information, and of course including the user meta
- Autodetect delimiter compatible with comma ,, semicolon ; and bar |
- Export users and customers choosing delimiters and using some filters
- Create a cron task to do the import periodically in order to integrate WordPress with an external system
- Interaction with lots of other plugins like WooCommerce, BuddyPress, Paid Membership Pro, WooCommerce Membership, WooCommerce Subscriptions and

many others

- Import users from frontend using a shortcode

Usage

Once the plugin is installed you can use it. Go to Tools menu and there, there will be a section called *Insert users from CSV*. Just choose your CSV file and go!

CSV generation

You can generate CSV file with all users inside it, using a standar spreadsheet software like: Microsoft Excel, LibreOffice Calc, OpenOffice Calc or Gnumeric.

You have to create the file filled with information (or take it from another database) and you will only have to choose CSV file when you “Save as...” the file. As example, a CSV file is included with the plugin.

Some considerations

Plugin will automatically detect:

- Charset and set it to **UTF-8** to prevent problems with non-ASCII characters.
- It also will **auto detect line-ending** to prevent problems with different OS.
- Finally, it will **detect the delimiter** being used in CSV file
