

Loco Translate

<https://wpdemo.net/demos/plugins/loco-translate>

Loco Translate provides in-browser editing of WordPress translation files.

It also provides localization tools for developers, such as extracting strings and generating templates.

Features include:

- Built-in translation editor within WordPress admin
- Integration with automatic translation APIs
- Create and update language files directly in your theme or plugin
- Extraction of translatable strings from your source code
- Native MO file compilation without the need for Gettext on your system
- Support for PO features including comments, references and plural forms
- PO source view with clickable source code references
- Protected language directory for saving custom translations
- Configurable PO file backups with diff and restore capability
- Built-in WordPress locale codes
