LoginWP (Formerly Peter's Login Redirect)

https://wpdemo.net/demos/plugins/peters-login-redirect

LoginWP (formerly Peter's Login Redirect) lets you define a set of redirect rules for specific users, users with specific roles, users with specific capabilities, and a blanket rule for all other users. Also, set a redirect URL for post-registration.

You can use the following placeholders in your URLs so that the system will build a dynamic URL upon each login: **{{username}}**, **{{user_slug}}**, **{{website_url}}**.

Upgrade to LoginWP PRO to redirect users to the current page they are logging in from or back to the previous (or referrer) page after login using **{{current_page}}** and **{{previous_page}}** placeholders. Learn more

You can add your own code logic before and between any of the plugin's normal redirect checks if needed. See our documentation. Some examples include: redirecting the user based on their IP address and redirecting users to a special page on the first login.
