

Plugin Notes Plus

<https://wpdemo.net/demos/plugins/plugin-notes-plus>

Have you ever returned to a site that you built a while back and asked, “Why did I install this plugin?” This plugin provides an extra column on the Plugins page that enables you to add, edit, or delete notes about the plugins you have installed on a particular site. These notes are intended to provide documentation regarding why a particular plugin was installed and how or where it’s being used.

Features

- Add as many or as few notes as you need for each plugin.
- Edit or delete notes as desired.
- Select an icon to go with each note to quickly convey what type of content it contains (e.g., info, warning, link, etc.)
- Format notes using basic HTML tags if desired.
- Any links included in the note will be automatically converted to target="_blank"
- Notes are added and updated via Ajax, avoiding slow page reloads.
- Notes also display on the WordPress Updates page for any plugins that need to be updated.
- A filter is provided if you would like to display notes beneath the plugin description instead of in a separate column.
- A filter is available to selectively hide or display plugin notes in the admin.
