

Redirection

<https://wpdemo.net/demos/plugins/redirection>

Redirection is the most popular redirect manager for WordPress. With it you can easily manage 301 redirections, keep track of 404 errors, and generally tidy up any loose ends your site may have. This can help reduce errors and improve your site ranking. Redirection is designed to be used on sites with a few redirects to sites with thousands of redirects.

It has been a WordPress plugin for over 10 years and has been recommended countless times. And it's free!

Full documentation can be found at <https://redirection.me>

Redirection is compatible with PHP from 5.6 and upwards (including 7.4).

REDIRECT MANAGER

Create and manage redirects quickly and easily without needing Apache or Nginx knowledge. If your WordPress supports permalinks then you can use Redirection to redirect any URL.

There is full support for regular expressions so you can create redirect patterns to match any number of URLs. You can match query parameters and even pass them through to the target URL.

The plugin can also be configured to monitor when post or page permalinks are changed and automatically create a redirect to the new URL.
