

Translate Multilingual sites - TranslatePress

<https://wpdemo.net/demos/plugins/translatepress-multilingual>

TranslatePress is a WordPress translation plugin that anyone can use.

The interface allows you to easily translate the entire page at once, including output from shortcodes, forms and page builders. It also works out of the box with WooCommerce.

TranslatePress is a GPL and self hosted translation plugin, meaning you'll own all your translations, forever. It's the fastest way to create a bilingual or multilingual site.

MULTILINGUAL & TRANSLATION FEATURES

- Translate all your website content directly from the front-end, in a friendly user interface (translations are displayed in real-time).
- Fully compatible with all themes and plugins
- Live preview of your translated pages, as you edit them.
- Image translation support, for translating images, sliders and other media.
- Support for both manual and automatic translation
- Ability to translate dynamic strings (gettext) added by WordPress, plugins and themes.
- Integrates with Google Translate, allowing you to set up Automatic Translation using your own Google API key.
- Translate larger html blocks by merging strings into translation blocks.
- .. and more
