

Website LLMs.txt

<https://wpdemo.net/demos/plugins/website-llms-txt>

This plugin automatically generates an LLMs.txt file — a simple, structured list of important public URLs from your site — designed specifically for Large Language Models (LLMs) like ChatGPT, Perplexity, Claude, and other AI systems.

It works much like a traditional XML sitemap, but is optimized for the way AI agents read and learn from the web.

The plugin integrates seamlessly with popular SEO tools like Yoast SEO, Rank Math, and now AIOSEO, automatically excluding content marked as noindex or nofollow.

Future-proof your site for AI discovery

Lightweight, automatic, and customizable

No need for manual configuration

New: llms.txt AI crawler detection

We now track whether major AI bots like GPTBot, ClaudeBot, and PerplexityBot are reading llms.txt files.
