

# WP Croncontrol

<https://wpdemo.net/demos/plugins/wp-croncontrol>

WP Croncontrol lets you view and control what's happening in the WP-Cron system. From the admin screens you can:

- View all cron events along with their arguments, recurrence, callback functions, and when they are next due.
- Edit, delete, and immediately run any cron events.
- Add new cron events.
- Bulk delete cron events.
- Add, edit, and remove custom cron schedules.

The admin screen will show you a warning message if your cron system doesn't appear to be working (for example if your server can't connect to itself to fire scheduled cron events).
